Driven Trash
Pump

AMT Engine Driven Trash pumps are designed for applications which require high flow and solid handling capability. These pumps are constructed of heavy duty sand cast aluminum components featuring removeable/replaceable cast iron volutes, impellers and wearplates. Simple cleanout design permits easy removal of trash and debris without disconnecting hoses. Pumps are designed to handle liquids with solids content or dissolved solids and debris. Cast iron discharge port rotates in 90° increments. An electric start option is available on many models.
